

CARBONCOIN WHITEPAPER

JUNE 2021

WHAT IS CARBONCOIN?

Carboncoin aims to accelerate the transition of traditional financial assets to the digital world and to produce nature-friendly crypto money with completely renewable energy sources. A green world without clean energy papers.

CRB

Almost all of the machines in the network, wind, solar renewable energy, will shed a different light on the financial dimension. The project to be designed and designed for a test project to be held in August is planned for the main transition in April with 2023.

Technology

Carbon; It offers scalable decentralization with advanced cryptography to use pure computing power.

We are currently using the Ethereum network as a sidechain. The Ethereum testnet has limited security, availability, and performance. For now, we are developing on a sidechain like Moonbeam. All the sidechains we want to work with are Ethereum compatible.

World Energy Problem

The rapid increase in the world population and the widespread use of "mobile" and "Internet of Things" will cause energy problems in the world in the future. Major disasters await us as a result of global warming. So what should we do to reduce this problem?

Carbon; He formed a team to look for a solution to this question. It will save energy by developing a system with low energy cost and very small size. In the future, the energy needs of Blockchain mining will become unmet. Energy will be stored in the internet network with CARBON technology. The stored energy will be used in further processes. Thus, there will be no need for additional energy for each transaction. In addition, incentive funds will be allocated to today's energy companies for the use of renewable energy. Both digital and real world energy will use renewable energy. Thus, world energy consumption will decrease.

Near Zero Transaction Fee

Do not use centralized intermediaries and pay transaction fees for global person-to-person shopping. No longer; You are free to shop. You are in a world where energy is free, unlimited and free.

Assistant To The Banking System

CARBON; Keeps mining server statistics, searches client request counts for greylisting, whitelisting/blacklisting; uses it to stop bad players early. This feature; It is similar to the system banks use today to give people loans. Banks in the future; determines suitable customer groups according to mining server criteria.

CRB TECHNOLOGY WORKING PRINCIPLE

In our daily life, most of us expend energy while doing a job. While sitting, eating, or playing sports... Likewise, machines consume energy while they are working... What if we say that this spent energy will be copied and stored? EBE plates are consumed as energy during transfers in the CRB network. These EBE plates do a revolutionary job in the blockchain network with a self-replicating coding in a transfer or while doing a job. EBE plates multiply by creating their own reflections during a process, just as a person sees himself looking in a mirror. The EBE plate spent performing the operation leaves a copy of itself. This copy creates another copy in the same way in subsequent operations. Thus, energy constantly renews itself. All money transfers and other blockchain services on the CRB network are powered by renewable energy. We look forward to bringing this revolutionary technology to you.

Let your investment gain value while helping us to create a more livable world.

Behind the project is an ambitious young and dynamic real team. We plan to expand the marketing and software staff of our team after the pre-sales. The majority of the revenue from pre-sales will be used for renewable energies network, project and advertising expenses.

We will start our negotiations with companies in order to strengthen our financial resources. We are at work here, we will always be accessible and at the beginning of our work for a more livable world.

Abstract

We'll be creating live documents here early and often to keep our community updated on research and development, offers, tutorials, FAQs, and more. You'll get an early look at our ongoing work, sometimes raw, because we think openness is crucial to bringing our collaborators together around our common goals. We will also continually publish official white papers as our research solidifies. EBE (EnergyBackEnergy) plaques in the CRB network, which work in harmony with blockchains, are used in the energy spent in making transactions. The most important feature of EBE plaques is self-cloning. Thus, you have an endless supply of EBE records. Endless, inexhaustible energy. Taken together, these features will redefine what it means to have energy on the Internet and unlock the energy challenge of new global markets based on transactional data.

CRB ; It aims to provide support to companies for the use of renewable energy in industry, transportation and production areas against global warming, which is one of the biggest dangers of our world and threatening our future. CRB; by establishing a gateway between the real world and crypto; will rebuild and strengthen the world's energy infrastructure for a clean future.

With CRB technology, digital money transfers from one end of the world to the other will be completed in as little as 3 seconds. CRB; It will build a bridge between paper money and digital money. Thus, the transition of the banking system to crypto money will accelerate. Speed and size will be redesigned with CRB in the new world order.

With CRB technology, renewable energy sources will be used in cryptocurrency mining and the energy spent for mining will be incredibly low. CRB technology will enable renewable energy to enter our world day by day and serious cost reductions will be observed in the energy sector. Companies; It will save time and cost.

CRB also plans to launch a rich array of related products in the near future. CRB; It is a DEFI platform. Extremely low definition time makes it highly scalable and cost effective. We welcome you to our website for our roadmap.

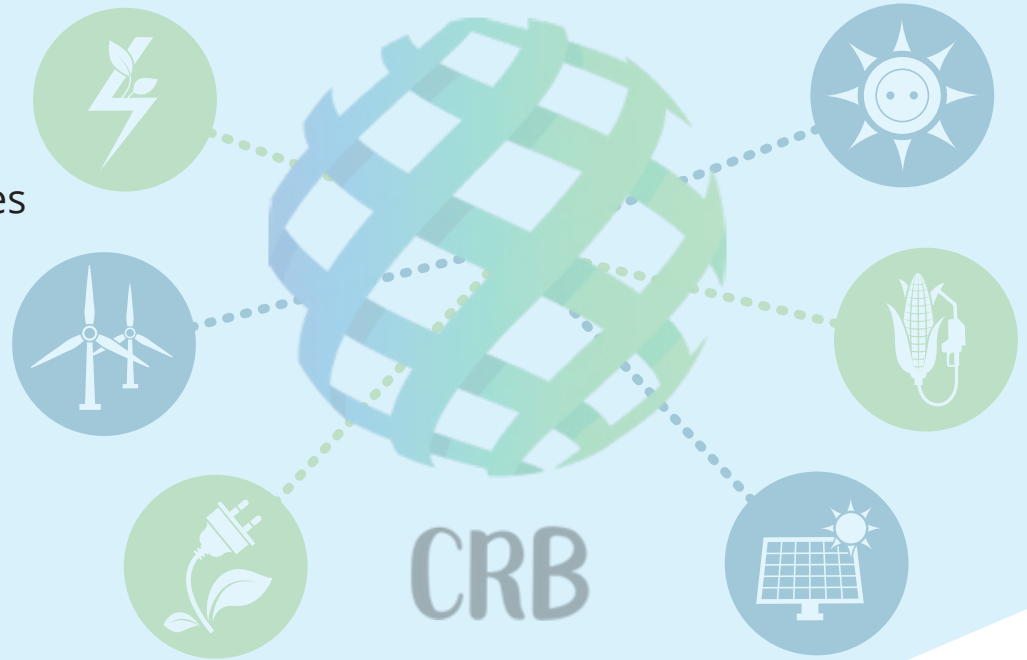

Carboncoin Properties

Some of our key features today:

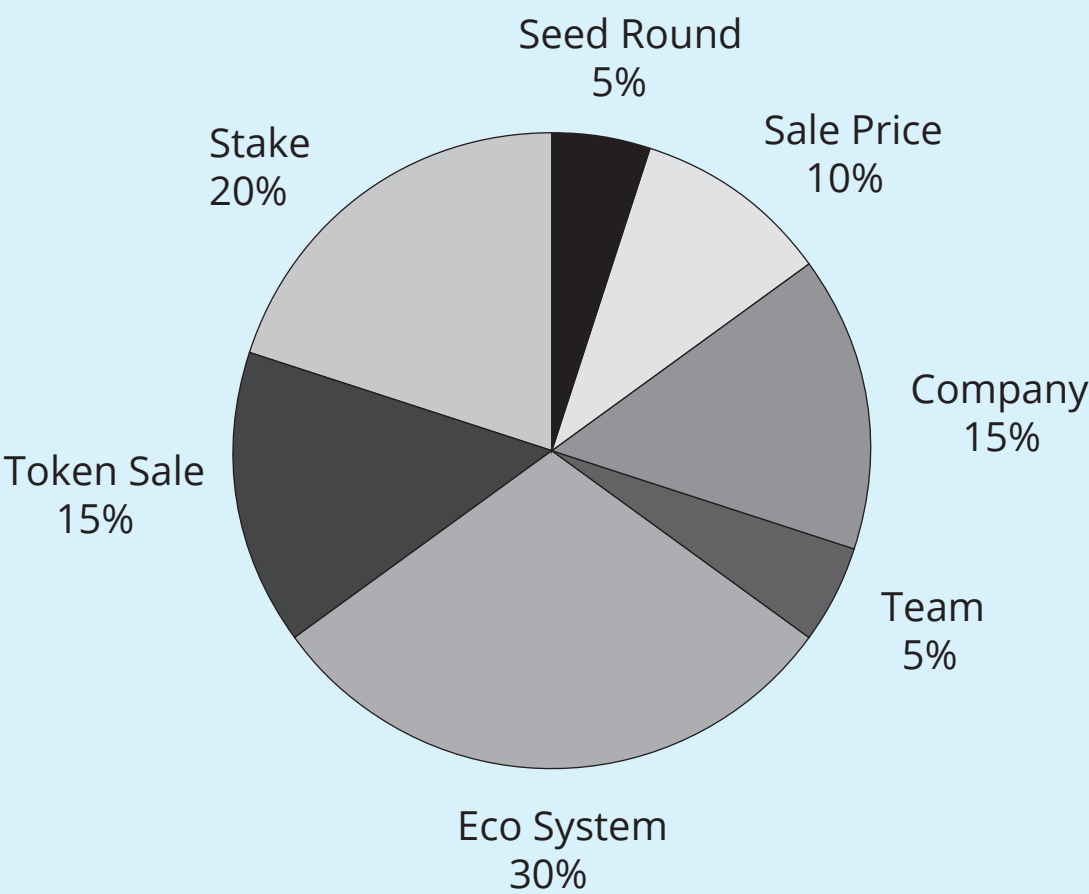

- *Different approach to blockchain security - Reducing energy - zero cost
- *Decentralized community incentives
- *Trustworthy committee
- *Focus on Simplicity
- *User and environmentally friendly

Our goals:

- *Item/Token
- *Business Development
- *Early Adoption Incentives
- *Influencer Marketing
- *Investor friendly

Token Allocation

Total Supply: 200.000.000 CRB

Seed Sale	5%
Sale Price	10%
Company	15%
Team	5%
EcoSystem	30%
Toke Sale	15%
Stake	20%

Result

As we have described, CRB has great potential to create value in the energy field. Energy creates opportunities for cost-free transactions with copying and increases the value and utility of assets.

Trillions of dollars.

CRB builds an open source decentralized network for use.

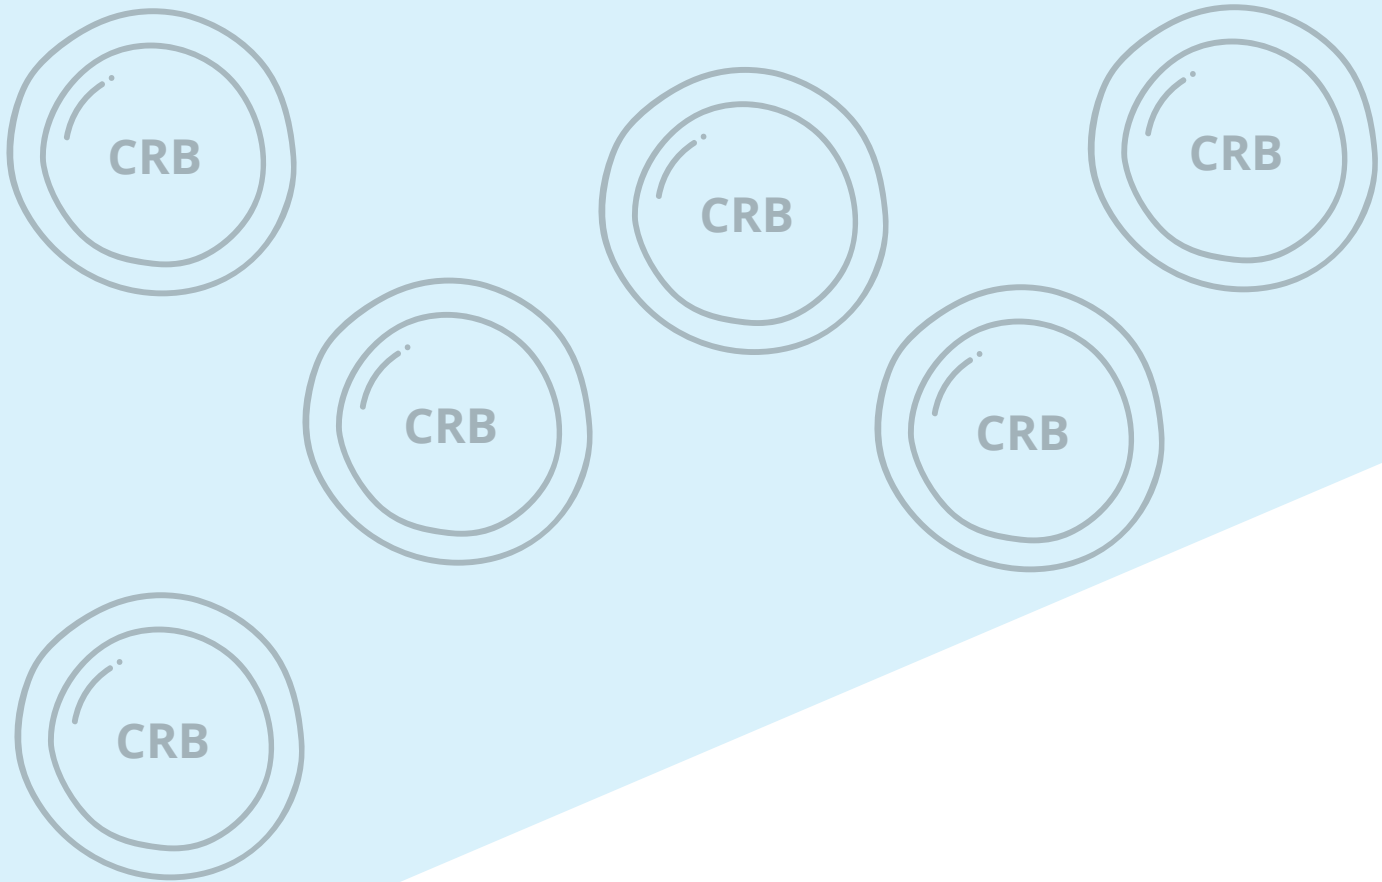

This means ending the various ENERGY WARS. CRB;

should be developed and managed appropriately. we brought together

A team of lawyers, cryptographers and programmers completed the first phase.

prepared for legal and technical research and development and registration

from the first beings. We are now ready to ask for the support of the community.
